(57) **ABSTRACT**
A hide gripping device has an elongated head, a plurality of teeth which are connected to the head in a row that extends generally parallel to a longitudinal axis of the head, and a handle which is connected to the head and is oriented in a vertical plane that extends generally perpendicularly to the longitudinal axis. The handle includes an elongated hand grip which extends in a first horizontal plane that is vertically spaced apart from a second horizontal plane in which the longitudinal axis lies, and the teeth extend from the head in a direction opposite the hand grip.
