(57) **ABSTRACT**

A pre-packaged beverage brewer press is taught that incorporates a hollow cylinder (**20**) having a full diameter body (**22**), an open top (**24**) and a closed bottom (**26**) with a removable holder (**36**) engaging the cylinder bottom. The holder has a configuration suitable to retain a beverage cartridge (**40**), with the holder having at least one exit opening (**46**) therein. A removable manually operated piston (**74**) is configured to be engaged within the hollow cylinder and includes an air-tight seal and an outwardly extended top (**76**). A cup (**98**), having a wide flat bottom for standing evenly on a flat surface, is attached to the cylinder bottom. When heated water is placed within the cylinder and the piston is inserted into the cylinder and urged downwardly by a user, sufficient pressure is created to compress the water into the beverage cartridge permitting steeping therefore brewing a beverage which is discharged into the cup attached beneath.
