[57] **ABSTRACT**

An intraocular lens for use as an artificial lens implant anteriorly of the iris which has a pair of position fixation elements providing a three-point support for the lens. One of the position fixation elements has a portion swivelable about a base portion attached to the lens body so that the position fixation element may be adjusted to provide a three-point support corresponding to measured dimensions of the eye and may be attached in the selected position by sutures before implantation in the eye.
