(57) **ABSTRACT**

The present disclosure relates, according to some embodiments, to articles and systems for hangers. In some embodiments, hangers may be operable as garment hangers. A hanger may comprise a body comprising two arms disposed opposite to each other, a neck disposed upward from the body, and an auxiliary section disposed downward from the body. The auxiliary section may comprise an auxiliary panel connected to the body by an extension panel, and at least one securing panel disposed on the auxiliary panel. The securing panel may comprise an outer tab connected to the auxiliary panel at two points, at least one vertical tab connected to the auxiliary panel between the two points, and at least one lateral tab disposed along an inner wall of the outer tab. Lateral tabs may comprise a rectangular, trapezoidal, or other polygonal geometry.
