(57) **ABSTRACT**

Described is a process for making a dry and stable hemostatic composition, said process comprising

a) providing a dry granular preparation of a biocompatible polymer suitable for use in hemostasis,

b) coating the granules in said dry granular preparation with a preparation of a coagulation inducing agent, thereby obtaining coagulation inducing agent coated polymer granules,

c) filling said coagulation inducing agent coated polymer granules into a final container,

d) finishing the final container to a storable pharmaceutical device containing said coagulation inducing agent coated polymer granules as a dry and stable hemostatic composition.
