[57] **ABSTRACT**

A laparoscopic instrument comprises a receptacle for storing a predetermined amount of a biologically active composition, a mechanical ejector operatively connected to the receptacle for ejecting the predetermined amount of the biologically active composition into a patient's abdomen, and an actuator operatively connected to the ejector for enabling an actuation of the ejector to eject the predetermined amount of the biologically active composition into the patient's abdomen. The laparoscopic instrument includes an elongate hollow shaft.
