4A.1
Sealing a sample within a containment vessel
4A.2
Transferring the sample to a nucleic acid binding element positioned in the containment vessel
4A.3
Purifying nucleic acid from the sample in the containment vessel
4A.4
Amplifying the target nucleic acid in the containment vessel
4A.5
Detecting amplification of the target nucleic acid in the containment vessel
4A.6
Detecting the target nucleic acid
