(57) **ABSTRACT**

A user interface is presented via which user inputs can be received and maps can be displayed. A user selection of a destination and a user specification of a region of interest on a map are received. The region of interest surrounds the destination on the map. In response to receiving the user specification of the region of interest, a destination map is displayed via the user interface. The destination map includes both the destination and the region of interest, and a layout of one or more roads that include one or more routes to the destination at multiple different scales.
