OTHER PUBLICATIONS

J. Am. Chem. Soc., 1996, 68, 3441–3449, "Flow Injection Analysis Using Continuous Channel Electrophoresis", J. M. Mesaros, P. F. Gavin and A. G. Ewing.

Journal of Chromatrography A., 676 (1994), 409–420, "New Approaches to Concentration on a Microliter Scale of Dilute Samples, Particularly Biopolymers With Special Reference to Analysis of Peptides and Proteins by Capillary Electrophoresis", Stellan Hjerten, Jia–Li Liao and Rong Zhan.

Anal. Chem., 1993, 65, 3313–3319, "Continuous Electrophoretic Separations in Narrow Channels Coupled to Small–Bore Capillaries", J. M. Mesaros, G. Luo, J. Roeraade and a. G. Ewing.

Anal. Chem. 1992, 64, 2348–2351, "Enhanced Separation of DNA Restriction Fragments by Capillary Gel Electrophoresis Using Field Strength Gradients", Andras Guttman, Bart Wanders and Nelson Cooke.

Anal. Chem. 1991, 63, 2795–2797, "Improved Separation of Mucleic Acids With Analyte Velocity Modulation Capillary Electrophoresis", Tshenge Demana, Maureen Lanan and Michael D. Morris.

Biotechnol. Prog. 1990, 6, 21–32, "Continuous Counteracting Chromatographic Electrophoresis", Cornelius F. Ivory and William A. Gobie.

Counteracting Chromatographic Electrophesis, 18(1), 1–64 (1989), "A Theoretical and Experimental Study of Counteracting Chromatographic Electrophoresis", Bruce R. Locke and Ruben G. Carbonell.

Counteracting Chromatographic Electrophesis, 18(1), 54–109 (1989), "A Theoretical and Experimental Study of Use of Electric Fields in Solvent Extraction: A Review and Prospectus", Timothy C. Scott.

Journal of Biochemical and Biophysical Methods, "Field Gradients Improve Resolution on DNA Sequencing Gels", W. ansorge and S. Labeit.

Proc. Natl. Aca. Sci. USA, vol. 80 pp. 3963–3965, Jul. 1983, "Buffer Gradient Gels and S Label as an Aid to Rapid DNA Sequence Determination", M. D. Biggin, T. J. Gibson and G .F. Hong.

Analytical Biochemistry 120, 12–18, 1982, "Nonuniform Field Gel Electrophoresis", C. Dennison, W. A. Lindner and N. C. K. Phillips.

Science, vol. 227, "Separation Techniques Based on the Opposition of Two Cunteracting Forces to Produce a Dynamic Equilibrium", Patrick H. O'Farrell.
