(57) **ABSTRACT**

A device is provided which includes an activity sensor, a communication portion, and a route suggesting portion. The activity sensor can detect physical activity of a user of a device. The communication portion may provide access one or more social networks via a communication network, in which the device may communicate with a social network of contacts. The route suggesting portion may provide an alternate route to travel such that the predicted odor may not offend others that are socially connected to the user and that travel the same routes as the user.
