- [57] **ABSTRACT**
 Silicone elastomer compositions comprising (a) a diorganovinylsilyl-terminated diorganopolysiloxane, (b) an alkenyl isopropenoxysilane or product of partial hydrolysis-condensation (c) an organohydrogen-polysiloxane and (d) platinum or platinum compounds as the catalyst. They possess an excellent fluidity, and are curable at moderate temperatures. The compositions are cured on heating with the formation of strong adhesive bonding to the surface of a substrate to which they are in contact.
