[57] **ABSTRACT**

The invention is directed to a changeable labelling system wherein a readily changeable label is secured to an article to be labelled. In the first embodiment an impression surface having overlaying adhering translucent and protective transparent sheets provides a readily changeable label that can be secured to an article in a variety of ways. In addition, in an alternate embodiment a readily erasable surface is secured to the article to be labelled and a protective sheet overlays the surface to prevent inadvertent erasure.
