(57) **ABSTRACT**

Disclosed are systems and methods for expanding the apparent range of movement of actors during a stage performance, from a stage platform to a background display, or from a background display to a stage platform. The appearance of the live actors on the stage platform and images of the live actors on the background display is the same. Timing, location and movement of the live actors on the stage platform is integrated with images of the actors on the background display. The integration of the live actors and images appears to an audience that an actor has moved from stage platform to the background display, or from the background display to the stage platform.
