(57) **ABSTRACT**

A palm-sized handheld device includes a body casing having a top end and a bottom end. In accordance with one embodiment of the invention, the device also includes a display screen proximately disposed near the bottom end of the device, and a plurality of input keys proximately disposed near said top end of the device above the input display screen.

As a result of such a configuration, accessibility to the input keys by users+ thumbs is improved while glare from a bright light source on the display screen may be decreased.
