(57) **ABSTRACT**

In one general aspect, a computing device can include a base portion including an input region, and a display portion having a hinge portion. The computing device can include an extension member coupled to the base portion and configured to move the hinge portion of the display portion in a direction away from the input region in response to the display portion being rotated about an axis of the hinge portion from a closed position with respect to the base portion to a flat position with respect to the base portion.
