(57) **ABSTRACT**

A multifunction animal collar. The collar including a plurality of electronic components for collecting and transmitting audio and visual information to and from a remote user in real time. The plurality of electronic components including a satellite communication chip, a GPS chip, a camera, a thermographic camera, infrared camera, a microphone, a speaker, and a light. The satellite communication chip capable of transmitting and receiving viewed images and sounds to a remote user for viewing on an external electronic device and back to the animal in real time.
