(57) **ABSTRACT**

Washing machine appliances and method for operating washing machine appliances are provided. A washing machine appliance has a tub and a basket rotatably mounted within the tub, the basket defining a chamber for receipt of articles for washing. A method includes flowing a first volume of liquid into the tub, the first volume of liquid at a temperature correlated to a treatment option selected by a user, and agitating the articles within the tub for a first period at a first rate. The method further includes flowing a second volume of liquid into the tub, the second volume of liquid at a temperature correlated to a temperature option selected by a user, and agitating the articles within the tub for a second period at a second rate.
