(57) **ABSTRACT**

A lighting device is provided that includes: a light emitting section that has a light emitting element and a switch for controlling a lighting state of the light emitting element; a housing that stores the light emitting section and has one end section which is open; a translucent cover that covers the opening of the housing; and a frame that is provided between the housing and the cover. The frame includes an edge section that presents a frame shape and a holding section having one end provided in the edge section and the other end protruding from the edge section. The holding section holds an operation section operating the switch and is exposed from the cover.
