(57) **ABSTRACT**

A commercial shelf product alignment device for facilitating neat and straight alignment of commercial products on a shelf in a market includes a handle having a first end and a second end. An elongated shaft is coupled to and extends from the handle. A bend is positioned in the shaft defining a first section and a second section of the shaft. The first section defines a right angle with the second section wherein the shaft is configured for aligning products on a commercial shelf by abutting the products against the first section of the shaft.
