(57) **ABSTRACT**

The invention relates to systems and methods for managing emails where an email server that may comprise one or more computer systems, and which may be part of an email system, receives an email addressed to a specified first user. The email server may analyze the received email and access one or more electronic databases, which may comprise information related to one or more respective registered users of the email system. The databases may be stored on one or more computer-readable storage media operatively connected to the email server.
