(57) **ABSTRACT**

A bed for a pet comprises a computer keyboard simulating enclosure having a top side having a plurality of simulated computer keys, a bottom side adapted for laying on a horizontal surface, and a peripheral edge. A heating element is fixed within the enclosure and is adapted to heat at least the top side of the enclosure. A power conduit traversing the enclosure is adapted for connecting the heating element with a power source. The bed further includes pressure-activated switch for activating the heating element, a keyboard sound simulating device, an illumination device, a vibration device, and/or a simulated laptop display projecting away from a rear side of the enclosure.
