(57) **ABSTRACT**

A hair product application device for dispensing a hair product composition directly from a glove. The hair product application device generally includes a glove having at least one blister pack containing a hair product composition. The blister pack includes a pocket that holds the hair product composition and is at least partially in contact with an exterior surface of the glove. The pocket has a rupturable membrane and optionally, a backing sheet that is located at least partially on the exterior surface of the glove. The hair product composition is released by rupturing the rupturable membrane of the blister pack by applying an external pressure to the exterior surface of the rupturable membrane or an internal pressure to the pocket using a pneumatic device.
