[57] ABSTRACT

Attachment means for an artificial intraocular lens system for implantation in the eye comprises a pair of capsule clips laterally extending from the edge of the lens and lying within or parallel to the plane of the lens, and at least a single clip diametrically opposed to the pair of clips. The members of the pair of capsule clips are resiliently biased into co-planar alignment or biased against separation. The members of the pair of capsule clips may have serrations for more secure engagement of the capsule.
