

7

- (e) placing said micro staple in a staple holder;
- (f) pressing said micro staple through the iridectomy such that one leg thereof passes through said fourth U-shaped holding member and one of said first, second, or third U-shaped holding members;
- (g) closing said micro staple to hold said lens implant in position;

8

- (h) removing said forcep and said staple holder through said incision;
- (i) pulling the edges of said incision together; and
- (j) suturing the incision closed.

11. The method of claim 10 wherein the base of said micro staple is about 0.3mm in length, said two diverging arms are each about 0.75mm in length and said two converging legs are each about 0.15mm in length.
