(57) **ABSTRACT**

The present disclosure relates to beverage brewing devices which are useful for facilitating fluidization and flavor extraction in beverage brewing devices. In particular, the present invention includes a number of embodiments, including beverage brewing devices comprising one or more extraction chambers. The beverage brewing devices are useful for facilitating fluidizing brewing process such that all ingredients contained within the brewing device are accessed in the brewing process. Additionally, desirable properties of brewed beverages are attained without using separate and/or mechanical means. As an additional advantage, the cleaning processes typically required subsequent to preparation of beverages, and in particular the foamed beverages of the present invention, is diminished or avoided.
