[57] ABSTRACT

Unique powdered hydrated emulsifiers, or surfactants, for use in the food and cosmetic industries comprising, by weight, 85-98% emulsifier and 2-15% water. Virtually all of the common emulsifiers capable of hydrogen bonding are suitable for use in preparing the powdered hydrated emulsifier compositions of the present invention. The invention further comprises a method for preparing the powdered hydrated emulsifiers basically comprising a mixing and spray-chilling operation.
