[57] **ABSTRACT**

[21] **Appl. No.:** **415,806**

An assembly for inserting an intraocular lens into an eye having an elongated first member with two side walls for closing the haptics of lens around the lens and a second member between said walls. The lens is placed on the second member with the haptics being engaged by the walls of the first member. The part of the assembly holding the lens is introduced into the eye and then the lens is released by withdrawing the first member and thus disengaging the haptics.
