for filtering conditioned air from said air conditioning unit;

(g) means for regulating airflow through said blower and manifold means whereby a maximum of 20 percent of said flow rate from said air conditioning unit is supplied to said outlets and the balance of said flow rate is recirculated through said plenum to said inlet of said air conditioning unit.

2. The system of claim 1 wherein said blower means comprises a high efficiency two-stage centrifugal blower.

3. The system of claim 1 wherein said filter means comprises at least one filter of the HEPA type.

4. The system of claim 1 wherein said filter means is effective in removing airborne chemical, biological and radioactive contaminants.

5. The system of claim 1 comprising from one to ten said outlets each having a regulated flow capacity therethrough of about 20 cubic feet per minute.

6. The system of claim 1 wherein the flow of conditioned air to said outlets is about 20 cubic feet per minute at a pressure above atmospheric of about 7 to 14 inches of water.
