

7

color separations that represent the input document,
and the input document having a latent photocopier
tracking signature printed thereon in yellow;
an image processing unit that generates an output image
based on the digital image data, the image processing
unit generating the output image based on differences

8

between corresponding pixel values of a blue color
separation and a green color separation; and
an output terminal for displaying the output image to view
the photocopier tracking signature.
