dles extending from the larger open mouth end of said conically shaped body member with flexible cords extending from opposite sides of the handles into the plastic material of said body member and secured within the plastic material of the body member.

2. A case as defined in claim 1 wherein the body member comprises reinforced urethane.

3. A case as defined in claim 2 including a reinforced plastic body comprising a screen member embedded within said plastic body member.

4. A case as defined in claim 1 having a pair of endless flexible cords extending through the wall of said body member on opposed sides and meeting within the interior of said body member at a fastener thereby serving as a retainer holding a tool in place within said body member during transport.

5. The combination of a conically shaped well drill bit having cutting members disposed on the outside con-

tour of a conical surface and a conically shaped bucket-like plastic protective cover and carrying case in contact with the cutting members.

6. The combination defined in claim 5 wherein the plastic case comprises a strengthner screen member embedded in the plastic of said conically shaped case.

7. The combination defined in claim 5 wherein the plastic case is bottomless and topless and has carrying means comprising flexible cords embodied in the plastic of said case and extending from the larger mouth opening of the conically shaped case for manual access.

8. The combination defined in claim 5 including a retaining member of a plurality of flexible cords extending internally into the case and fastened together inside the conically shaped case to engage the drill bit and hold it in place during storage and transport.
