(57) **ABSTRACT**

Implementations of a mount assembly for interchanging optical sights on a pistol are provided. In some implementations, the mount assembly comprises an adaptor plate and a pistol slide having an adaptor interface. In some implementations, the adaptor interface of the pistol slide is configured to receive an adaptor plate therein. In some implementations, an optical sight may be secured to the adaptor plate. In some implementations, the walls of the adaptor interface may be constructed in the form of a female portion of a dovetail joint. In some implementations, the ends of the adaptor plate are constructed in the form of a male portion of a dovetail joint. In this way, when the adaptor plate is inserted into the adaptor interface a secure connection may be achieved. In some implementations, a dovetail configured to receive a rear sight is positioned between the ejection port and the adaptor interface of the pistol slide.
