(57) **ABSTRACT**

One embodiment of the present invention is directed to a broadhead assembly that includes a ferrule having a shaft engaging end, an opposed tip end, and an axially extending elongate body. The tip end is formed as an integral part of the ferrule and includes a plurality of facets circumferentially arranged about the axially extending elongate body. The facets are tapered rearwardly and outwardly relative to the tip end and form a tip base that is positioned at a forward portion of the elongate body.
