ABSTRACT

(57) A sinker configured to be attached to fishing line and used during fishing to position a fishing hook at or in proximity to the bottom of the body of water. The sinker may include a main body that has a folded construction. The body may include one or more sets of paired cavities. Each of the cavities align together in the folded, closed orientation to form an enclosed space to hold one or more of a fish attractor or weight. The sinker may also include additional attachments that attach to the main body and are configured to receive additional weight and/or fish attractor. The sinker may also include an anchor configured to engage with the bottom of the fishing location, and may also include a stabilizer for additional stabilization.
