(57) **ABSTRACT**

The instant invention is a photograph display kit. The kit includes a sticker sheet where the upper layer contains a first perforation in a design defining a photograph printing area, and the backing has a second perforation in a different and larger design defining a border area around the photograph. When an image is printed onto the sticker sheet, the border section with corresponding upper layer can be removed from the sticker sheet, and the portion of the upper layer outside of the photograph printing area can be removed so that a photograph with a border remains. A pipe cleaner, acting as a supporting rod, can then be attached to the back of the photograph and inserted into a base so that the photograph is displayed. A series of photographs can be printed and displayed together in such a manner as to create a fanciful bundle of photographs.

5 Claims, 5 Drawing Sheets
