(57) **ABSTRACT**

A folding chair provides for leveling seating upon uneven ground. The chair includes folding chair frame with a pair of front leg assemblies and a pair of rear leg assemblies, each pivotally attached to a central hub. Each leg assembly has downwardly extending tubular portions and a means for securing the portions at a desired height. The adjustable legs provide a means for a level seating upon ground surfaces of varying elevations. The chair further utilizes inflatable arm rest, seat rest and back rest portions in one (1) embodiment.
