(57) **ABSTRACT**

A system that incorporates the subject disclosure may include, for example, a processor to perform operations including sensing a gesture performed by an object in a vicinity of a sensor, associating the gesture with the at least one gaming action responsive to determining that the gesture is a new gesture not previously associated with at least one gaming action of a plurality of gaming actions that control presentations produced by a gaming application, sensing by way of the sensor a subsequent instance of the gesture by the object or a different object, obtaining the at least one gaming action associated with the gesture responsive to detecting the subsequent instance of the gesture, and providing the at least one gaming action to the gaming application. Other embodiments are disclosed.
