[21] Appl. No.: 196,281

[57] ABSTRACT

[22] Filed: Oct. 14, 1980

An intraocular lens utilizing a lens portion or optical zone. An appendage is coupled to the lens portion and extends away from the same to the periphery of the eye. A spring mechanism used in conjunction with the lens portion permits resilient movement of the appendage in relation to the lens portion when forces are exerted on the appendage.
