**ABSTRACT**

[57] The successful fitting of bifocal lenses presents, conventionally, difficult and expensive problems due to a variety of different and conflicting requirements which must be mutually reconciled in every compound bifocal. In the present disclosure a standardized laminated lens system for compound bifocals is provided, of either positive or negative power, using a minus cylinder single vision lens on the inside having a standardized convex surface, and spherical lens on the outside having an inner concave surface of the same standardized curvature, the outer convex surface of the spherical lens having the bifocal addition associated therewith.
